# Invent something of your very own with an egg drop experiment

The aim of the experiment is to invent a contraption to protect an egg from cracking when you drop it on the ground. It may take several tries, but practice makes perfect!

You will need:

- An egg (or a few!)
- Any household items you think you may need to build your container
- Paint, pens, stickers to decorate

You are free to make this however you like- it's your very own invention!
