

EVVR

Evvr App

An easy-to-use smart home system with humans at heart.

A modern stone house with large windows overlooking a lake and hills. The house is built with dark stone and has a prominent stone wall in the foreground. The background shows a calm lake and rolling hills under a clear sky.

Simplify your life, with Evvr App.

Whether you are a homeowner, an installer, or a system integrator, the Evvr App can help you to set up and manage your home automation systems intuitively and connect all your smart-home technology in one app. All your private data is processed and stored in real-time and locally.

Simplify and streamline your smart control experience, with Evvr App—a smart home system with humans at heart, today.

Select, Set Up and Add Scenes With A Touch

Evvr Scenes' Store offers unparalleled convenience and endless possibilities for your smart home experience.

At Evvr Scenes' Store, find the popular, high-rated scenes recommended by Evvr, or search for the scenes you want, set them up for your home or your customers in a flash, share your scenes with the others, or download drivers and extensions developed by the enthusiasts and evangelists.

Intuitive Space Set Up Just As Your Real House

When you live in a house with multiple floors and many rooms, it can be tiring to find one room from a flat view listing all the rooms and devices on the same page.

With Evvr App, you can create "Rooms" under different "Floors" and more "Sub-Rooms" under any specific "Room", completely based on the real design and layout of your house. Find and access your smart devices in different spaces in the house intuitively on screen just as you walk into your real house.

Local Control and Data Storage

All your private data is processed and stored in real-time and locally. Enterprise-class data encryption ensures unparalleled user privacy when you access the system remotely.

Customized Interface for Various System Roles

You can grant different roles and personalize different levels of managing authority to your family members, friends and visitors.

Evvr App's interfaces change and adapt seamlessly based on each user's authority differences, e.g., users who need only basic devices' usage, such as elders, enjoy a simplified App view and can truly control devices at a touch.

Real-time Notifications

Keep an eye on your home anytime and anywhere with the real-time notifications pushed to your phone if anything unusual happens or a new member is added.

Manage Devices At The First Glance

Find and manage your most often used devices recommended by Evvr at the "Panel Area" once you open the app. You can also separate your smart devices into groups based on the device types or the rooms they are in. Access different groups and devices simply with a swipe, and control everything as you like with a touch.

Share Control with Your Family

Invite your family members, friends and visitors as you want to manage the devices in the space. You can grant different roles and personalize managing authority to each person.

Local Mesh Network

Add more Evvr controllers that perform as connection bridges to the existing network, and form a local control mesh network for a commercial or bigger space. Extend the smart home control range and control the devices at any corner with exclusive flexibility and stability.

Easy Remote Assistance Mode

With the Remote Assistance Mode, installers can take over the Evvr App and solve issues for homeowners easily at a distance. Meanwhile, homeowners can track the supporting progress remotely via Live-stream view.

OTA for Remote Upgrade

Whether you are in Europe, America or Asia, you can upgrade your Evvr devices remotely at ease with Evvr OTA support no matter where you are.

SDK for Expanded Compatibility

With provided SDK, you can develop integration drivers and integrate any smart devices supporting standard Zigbee 3.0, Z-Wave Plus and Wi-Fi protocols to the Evvr system.

Monitor Multi-Locations At One Time

Save multiple accounts at one app and swiftly switch between your home and office accounts. Monitor and receive real-time notifications from various locations at one time.
